SCREWDRIVERS

Bi-material handle

Unlike other brands the Teng Tools screwdriver blade has steel alloy wings that the plastic handle is moulded around. This allows for greater torque to be put on the screwdriver, ensures the blade is dead straight and stops the blade from moving in the handle.

The bi-material handle is designed for increased comfort and smooth action preventing blisters after continuous use. It gives better support and increased power transfer. The red resistant plastic is used for the core and ensures the blade is held securely and the soft black material prevents the screwdriver from sticking in the hand allowing for rapid movement.

Always use the right type of screwdriver for the fastening you need to turn!

Steel alloy **TT-MV+** blades

Flared or parallel phosphate tips

FULL RANGE:

FLAT

PH

PZ

HEX

TX

TPX

ROB

The blades and tips are manufactured from our TT-MV+ steel alloy material. This makes our screwdriver shafts ultra hard but also flexible. The precisely cut TT-MV+ steel alloy tips creates a sharp-edged surface that grips the fastening without slipping.

Always check that the tool is clean & dry before putting them away!

Do not use a screwdriver as a lever! Not smart & dangerous!

OVER 100
DIFFERENT TYPES
OF SCREWDRIVERS
AVAILABLE

The hole in the handle can be used to create a T-handle to generate extra torque. It can also be used for fall protection

What type of handle do I need?

The larger type of handle allows for more power and force to be executed with the driver.

The smaller type of handle make it easier to work quickly as less force is required with the driver.

Do not use
on electrics
unless you are
using the VDE
1000V range!

Round Shaft | for extra speed

HEX Shaft | for adding extra torque

The round shaft is smooth for rapid hand movement and a spanner can be used on a hexagonal shaft for adding extra torque.

Always use the
right handle
screwdriver for
the right job!

**VDE
1000V
RANGE**

TESTING
MACHINE

1000V

All of our insulated tools pass exhaustive testing to the international standard IEC 60 900 and the European standard for testing insulation to 1000V DIN 60 900.

The 1000V range are resistant to frost and cold as well as being flame resistant. The RBD (reduced blade diameter) range are ultra slim allowing for recessed screws to be accessed easily.

THE ULTIMATE CHOICE IN TOOL ORGANISATION

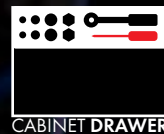

The EVA foam is laser cut to fit the exact shape of each tool for a perfect fit and added protection. The size and description of every tool is etched into the foam so you don't have to waste time searching for that 10mm socket again! When a tool is removed it's position is highlighted in red so it is easy to see what tool has been removed from your set and also to see where to put it back.
